

ICT Mentorship 2022 Introduction

Lesson 1

- Don't be foolish and don't stress into making a lot of money, have patience, have a proper risk management and stick to strategy
- Don't try to be better than **another Instagram trader**
- Attempt to try, nemusim sa nic naucit, staci pokial to skusim ;D

Lesson 2

- Nemsuim byt precise with my entries
- Ale budem precise z price action (ze kam chce ist)
- Najdem aj viac setupov, ako mozno si myslim
- Mozem aj tradovat aj MICRO a nasledne to viem buildovat :D
- Nebude tam **grc** na obrazovke, bude to simple :D
- Najdem minimalne 1 setup, ktory bude raz za tyzden fungovat
- Je to **possible through his mentorship** :D
- **BUDEM LEPSI V CITANI PRICE ACTION PO ABSOLVOVANI TOHTO KURZU !**

2022 ICT Mentorship Episode 2

Elements to the trade setup

- Tento Mentorship je na Futures (ES, NQ...) možno aj YM
- NQ = je **miernejsie agresívnejši**
 - Najprv by sme si mali tuto strategiu vyskusat na Paper Trading-u
- Teachings = **INDEPENDENCE! !!!**
- **Je to o tom, byt RIGHT about PA!**

Lesson 1

- Kde chce market prist ?
- Price being a paper clip a su tam nejake price points, ktore funguju ako magnet

- Najdem si 1 setup a nasledne to je to, price proste pojde po tu **ITL**, ako ICT predpovedal a je to hlavne clear Target

Lesson 2

- **Nemal by som tradovat kazdu session, pretoze:**
 - !! POTOM MAM EXPECTATIONS, ZE KAZDA SESSION MI VYJDE
 - *Stava sa, ze pokial mi to nevyjde, je velka sanca, ze po niekolkatich failed attempts, budem mať losing streak, pretože mam expectations, ktore sa mi nepodari naplnit..*

- Over trading etc.

Lesson 3

- **BIAS for the week:** likely movement higher / lower a nasledne mame bias na week
- **Daily BIAS:** swing highs, liquidity
- Its runnign to **stops, or imbalances**
- Above highs -> buy stops
- Below lows -> sell stops

Lesson 4

1. Weekly chart => Mark price points to price sweep and than wait for conf.
2. Daily chart => Look for swing highs & lows
 - Na daily chart-och je velmi vela liquduity
 - Aby **whales** profitovaly, musi sa sweepovat liquidta, aby brokers na tebe zarobili a ty si prejebal -> a oni zvutazili
3. Hourly chart =>

- Engineer liquidity -> enducing shorts
- Co sa tam stalo bolo nasledovne:
 1. Najprv sme consolidovali
 2. Nasledne sme manipulovaly a pushli sme cenu hore, popri tom sme sa dostali do EQ, kde sme aj sweepli Sell Stops a nasledne sme easily mohli pushnut hore, pretoze sme koniec koncov chceli pushnut do dalsieho EQ, kde sme mali cenu, kde mozeme za menej \$ ist do **SELL** pozicie

3. Nasledne pride distribucia, kde sa dostaneme, tam kam sme sa chceli dostat :D

SMART MONEY !

- EQ !
- If they want to short, there must be someone, where someone would buy at that price !

- BUYSIDE / SELLSIDE Liq = most probably stops (support & resistance)

- Tu sa nam hore sveepla liquidita a nasledne co sa stalo, ze ludia si nastavili S/L (Buy stops) hore [tam kde ma mysku] no a nasledne, kedze sme nemuseli byt lucky, mozno by sme sa z toho tradu aj dostali na zakldae toho, ze to by urobilo XY dalsich retail traders a nasledne nas este raz dostali z tradu, aby sme prerobili co najviac

Lesson 5

- Small TFs
- Small little Imbalances :D
- Sweepneme Buy Stop liquiditu a nasledne si najdeme setup FVG + OB atd a mozeme shortovat
 - Samozrejme moze sa to stat naopak :D

- **YOU WILL NEVER BE RIGHT ALL THE TIME**
- Moze sa stat, ze malo tam dam, ze closnem skoro, ze enternem skoro atd atd, moze sa vselico stat, je to normalne ;D
- This setups are great and they work
- **BOS = after swing low = ITL after Data HIGH- after sweeping liq, je to najblizsia low, ktoru bude sweepnuta**
A NASLEDNE, JE TAM FVG !!!!

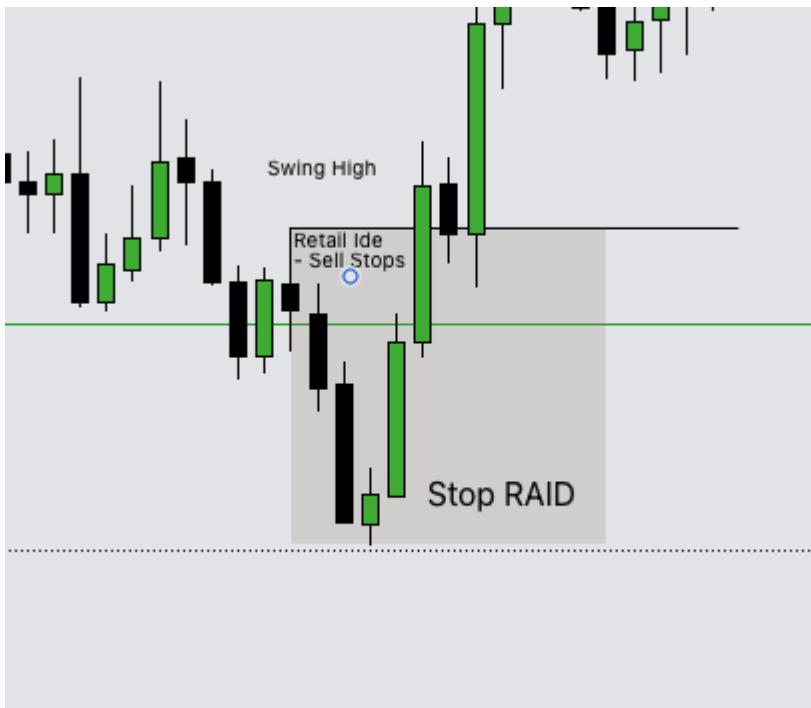

ICT Mentorship 2022 Episode 3

- IntraDay => intra day market structure shift
- If u see market structure , that is bearish, u might see a Intraday, because eventually there is high being taken in that day
- That's why he is using a market structure shift and not break

- Intraday => short term thing (in the one day we will sweep high (if we are bearish) and than we can continue down)
- Whales use 3 - 2 - 1 min timeframes- algorithms

- Think like retail trader, where are buy stops and where should price go in order to market to win :D
- Wait for the short term high to be swept and than we can enter a longs ;D

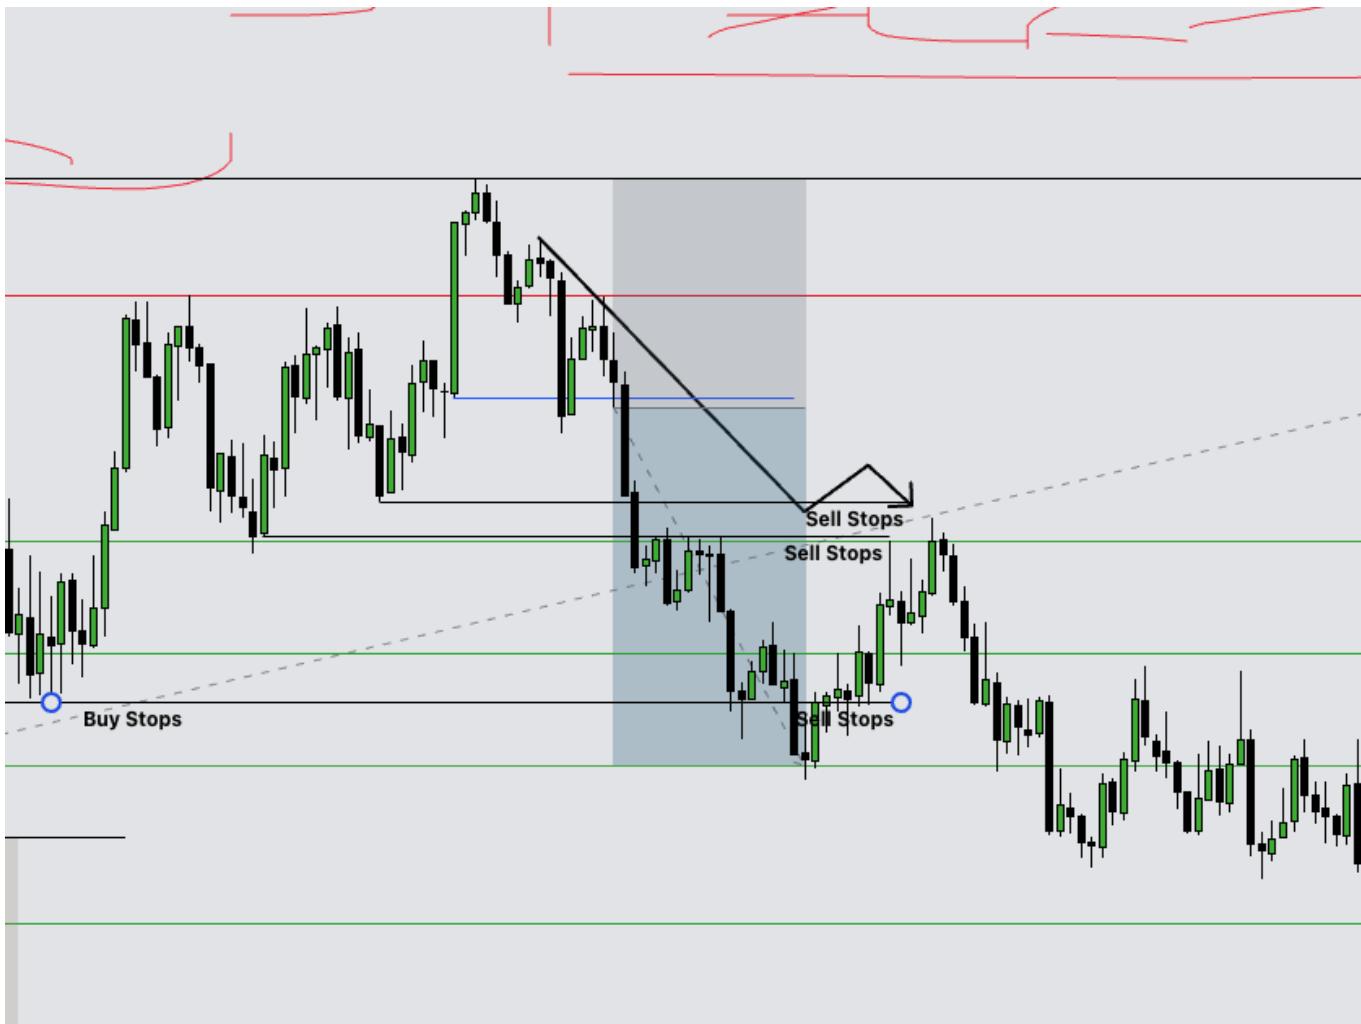

- When this happens, when swing high gets taken, it is more possible to take more buy side liquidity- so we can go for even more buy stops
- **NEMUSI SA TO CLOSNUŤ NAD TYM !**
- Tam sme earliest a nasledne sme tam v mieste, kde mozeme executnut :D

- We can trade swings-> manipulations, but it is bullshit
- I must be precise and do it more with market orders, than a Limit orders :D

ORDERBLOCK

- **Change of state of delivery !**

- Market is going from premium to discount
- Than we can use our continuing model, cause it is still going down and sweeping a **STOP RAID** below the PA, we have RN

ENGINEERING LIQUIDITY

- We bought here, here, here (showd on the chart) and then we can sell it at a higher price- where buy stops are, so we would sell to people, when they want to **buy** the price at high price-> in premium

\

PM session

- Trade from 13:00 Ny- time
- Best setup is at 14:00 <-> 15:00
- And trade until 16:00

Lunch session-> Dont really trade it, it is more problematic and you'll have lower win rates there :D

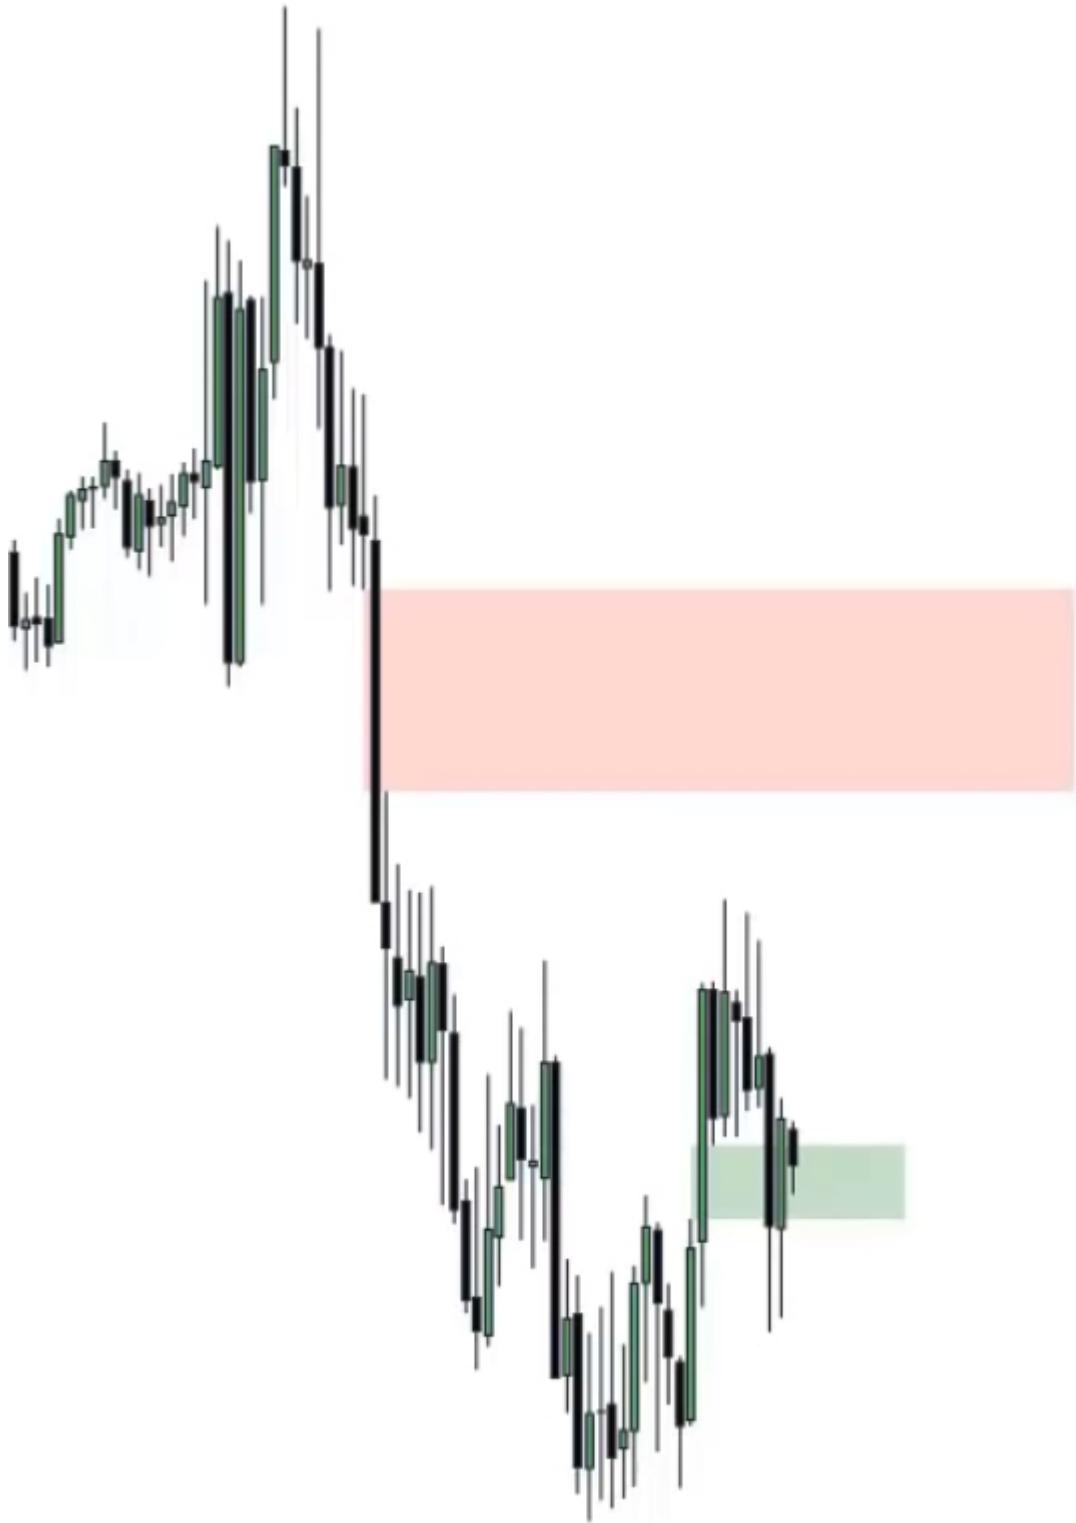

Recap

Internal Range Liquidity & Market Structure Shift

- Looking for a short term lows and short term highs inside a price leg, that we are retracing back into
- Liquidity is short term- high / low what stops above / below

- We have a selling pressure rn- because we swept a buyside liquidity and created a data high (cause we retraced) and then we got a **bearish** mss and then we went down

- Toto je live trade, ktorý **ICT** spravil
- Nasledne-> na co tam cakal, cakal kym sa stane **bullish** market structure shift no a nasledne pockal

-
- Co sa stalo ako prve, bolo to, ze price prisla do FVG (do tej kde je stvorcek) no a nasledne si povedal, ze **pocka na to, kym to hitne aj tu druhu a zanecha tak "chvostik"**
-

(*Most important)

- Dalej executol, ked videl **velmi malu buying pressure**

Psychologia

- Moze sa statl, ze price pride do tej nizsej FVG a nasledne na nas potom bude jemny natlak, pretoze ideme jemne dole a nasledne cakame, co to bude robit ;D
- **MUSI to byt jednoduche -> nekomplikovat to, pockat si a nasledne si pockat aj na to horsie scenario, ale byt presvedceny, ze to pojde podla nasej idei ;D**
- Moze to akumulovat (konsolidacia) a nasledne to moze ist mozno nizsie, pretoze chcu nakupit za co najmensie, takze to pojde este nizsie

- Nasledne targetoval Bearish FVG a nasledne, ked to hitlo FVG-, tak nasledne to closol :D
(Islo to dole -one more time ;D)

(nema v charte tie anotacie :D)

GG

Overall

- MSS -> ked vidime retracement pressure na opak trandu
- Sledujeme nasu engineering liquiditu
- Nasledne cakame na entry, ktore bude idealne v OB a nasledne za pomoci MSS
- Pockame si, ked to bude akumulovat a moze to ist jemne dole no a nasledne targetujeme, kde budu buy stops / sell stops :D G G for the day :D

Ict Mentorship 2022 Episode 4

- Pouzivame EQ - 0.5 na to, aby sme si tam mohli nastavit T/P, pripadne mozeme pouzit ja 0.382 a 0.618
- Mame si najst vlasten anotacie a nasledne takto to cele funguje :D

- Napriklad toto: 

ICT Mentorship 2022 Episode 5

- Delivery contracts:
 - **H** = March
 - **M** = June
 - **U** = September
 - **Z** = December
- They expire- 3rd fri in the month :D
- **DO NOT TRADE AFTER EXPIRATION !**
- Pozerame pravidelne -> openinterest na barchart.com - znamena to, ze cim vacsi je **Open Interest**, tym tam je vacsia liquiidta

Lesson- Intraday Framework

- **We don't trade - LUNCH Session**

Postup:
pattern !

1. Najprv si nacrtieme nase highs / lows (najlepsie ktore sa nahrabali v news (8:30) => **15m TF**)
Ked chceme pouzit tento pattern-> postup,tak nasledne musime vidieť nejaku sweep a nasledne elephants tail, že to pojde dole:D
(Vsetko by malo byt pocas AM- Session NY-opening)

TradingView

- Nasledne, ako tu mozeme vidiet, nepodarilo sa to tu, pretoze ICT hovori o tom, ako chce vidiet manipulaciu, ze sa sweepnu **Swing Lows/ Highs** a nasledne si urcime BIAS a nasledne pojdem hore :D
HOMEWORK (najst si bias na AM sessions a nasledne spravit 15 prikladov :D)
- Hrat sa tam z **EQ!**

HRAME SA S AMD- PRETOZE MOZNO, KED PRICE AKUMULUJE, JE DOST MOZNE, ZE TO BUDE CONTINUE-OVAT

MOST MOST MOST IMPORTANT !!!!!!!

CO SA STAVA- KED AM JE BULLISH, PM TO PRAVDEPODOBNE BUDE CONTINUE-OVAT !!!!

MOST MOST MOST IMPORTANT !!!!!!!

HLADAME STOP LOSSES a nasledne cakame na to, kym market pride do tej urone, kde je velmi pravdepodobne, ze tam bude S/L, odtial mozeme predavat / kupovat ;D

- Najviac simple strategia:

Buy the sell stops a nasledne sell the buy stops :D

MOST MOST MOST MOST MOST IMPORTANT

- **KED NEMAME SWING LOW TAK NASLEDNE
HLADAME FVG !!!!!!!!**

(*to je myslene tak, ze pokial nemame co sweepnut, alebo jednoducho je az moc velky pressure -> hladame FVGs*)

MOST MOST MOST MOST MOST IMPORTANT

Ked som uz zarobil na *Am* session, tak nasledne mozeme iba backtestovat na *PM* session a nasledne sa mi zdvihne sebavedomie :D !

ICT Mentorship Episode 6

- Nemame nejake secret indicators :D

Time is the most important asset of trading

- To znamena, ze pokial chceme byt **smart money**, cakame na spravny cas, kedy chceme longnut / shortnut

Stop loss

- dumb money nechcu spravne davat stoploss ;D
- Retail traders-> nevedia davat dobry stoploss, support & resistance, nevedia spravne urcit Daily Bias
- Nechapu liquidite
 - *Chart patterns...*
- --- Takze tomuto sa mam vyhybat -> patterns, chapat liquidite (price action), daily bias, support & resistance :D --
- **NIE Dumb money, ale Uniformed money**
- Netradime, ked iba vidime, ze cena ide dole, ked sa blizi retracement -> :D
- Nasledne, si musime dat bachan na continuation a potom nasledne, ked sme v spravnom price action a v spravnom **liquidity pool-e**, tak nasledne, ked uz vidime, ze retracujeme, tak nasledne vieme, ze pojde cena hore :D (Napisane, ze to "pojde_hore", pretoze nepotrebujeme dalsiu confirmaciu, pokial som si isty, treba to executnut :D)
- Treba sa vyhybat roznym religions-> chart patterns a ine picoviny :D
- ALGO're operating at time based chart :D

Bearish ICT Fair Value Gap ;D

- Algos are making a Bearish / Bullish FVGs, kde nasledne to funguje tak, ze pokial sme hore a sweepneme nejaku high, tak je sanca, ze sa vytvori FVG- a nasledne ideme **strmhlav** dole
- **To je naznak Bearish Pressure**(takze je celkom velka sanca , ze pojdem dalej nadol :D)

Samozrejme, toto iste plati aj na Bullish Fair Value Gap :D

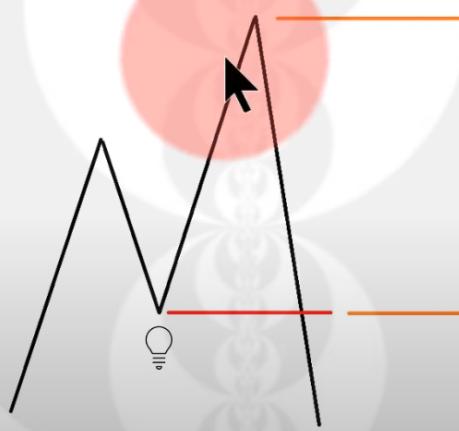

Bearish Market Structure Shift

The Market Structure Shift

The Bearish Market Structure Shift

The market will see Price delivery a rally above an old High or Highs, then quickly shift lower.

Significance is placed on the term “quick” and with Displacement Lower. Not a small candle move lower or a wick only, after a candle close.

- Dolezite slovicko je quick, pretoze pri Bearish MSS sa nasledne stane to, ze naozaj pojdem rychlo dole a nasledne **retracujeme** na druhý smer :D

- To iste aj pri Bullish- toto mi pride, ze sa tazsie hlada :D

- Dalsi priklad (aktualny), kedze sa to tazsie hľada :D

MOST MOST MOST IMPORTANT !!

**PODSTATNE JE, ZE POKIAL VIDIME MSS A NASLEDNE
RETRACEMENT PRESSURE----> !! MUSI TAM BYT FVG !!**

MOST MOST MOST IMPORTANT

- Co sa stalo a nasledne je tam ja MSS + Sweep of Liquidity a nasledne sme ju sweepli este raz (ITL) a potom mozeme hladat setups

MOST IMPORTANT

**Ked ne-enterneme, tak nasledne jebat na to, netreba byt z
toho v pici :D :D :DD 8=D***

MOST IMPORTANT

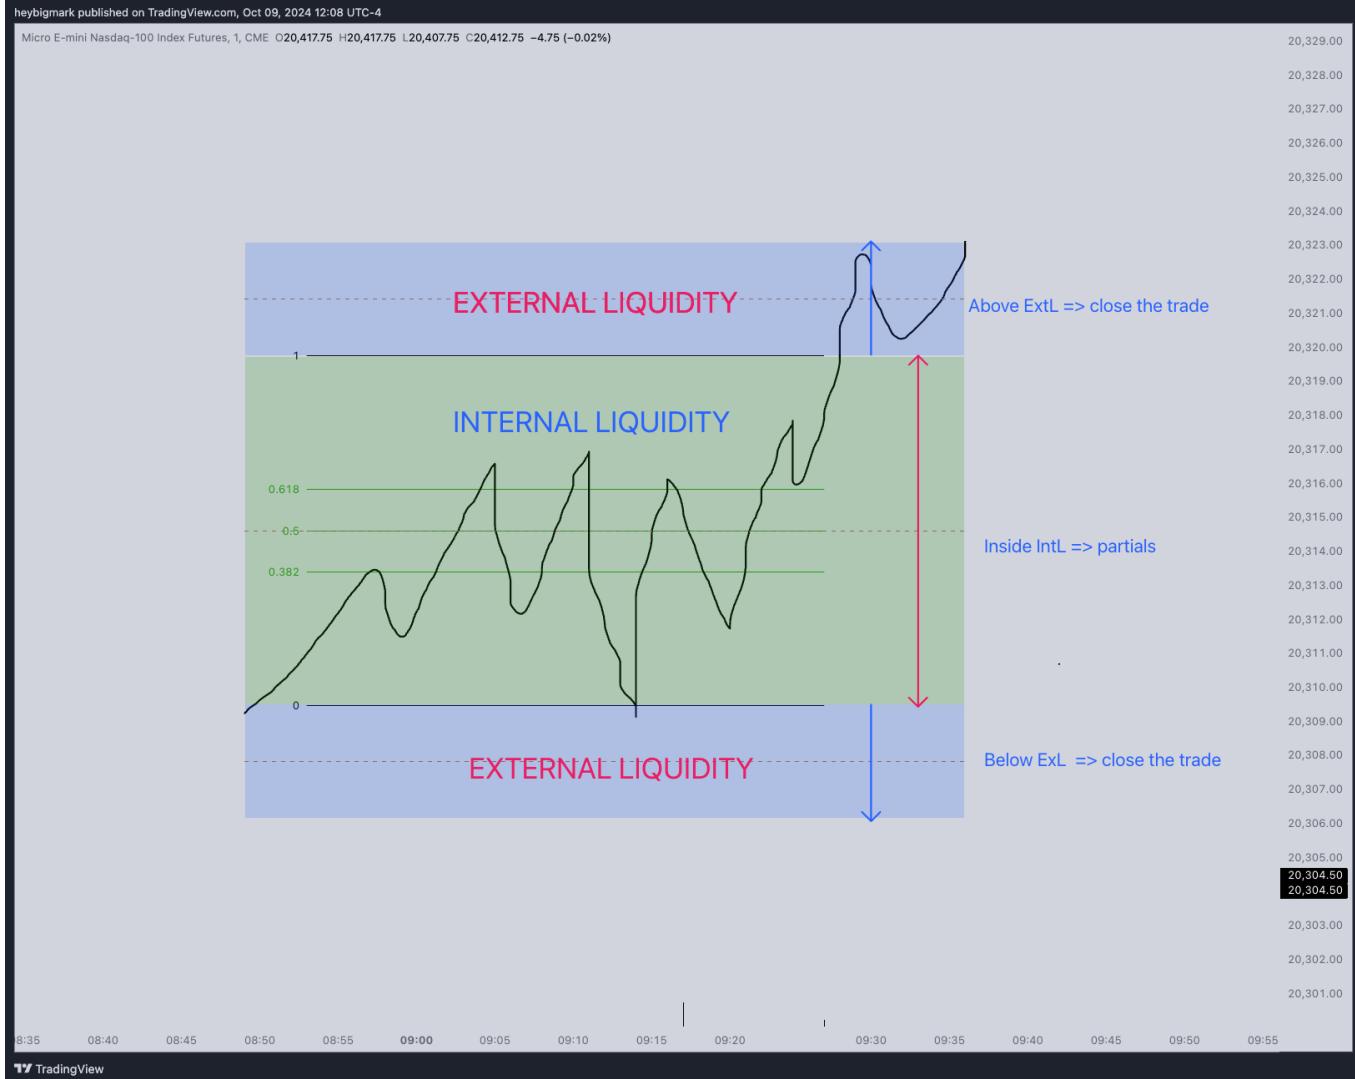

- Toto je priklad, kde vidime **krasne MSS**, kde sa sweepne swing high a nasledne retracujeme hore :D

- Nie najlepsi priklad, ale concept was right :D

- Toto je zatial najkrasi setup :D

Ex-> External Liquidity

IntL-> Internal Liquidity

Summary

- Pokial chceme dobrý setup a nasledne prichadza retracement (samozrejme aj continuation) -> cakame na MSS + FVG -/+
- Nebudem mat FOMO, ked missnem setup
- **Pri MSS musi tam byt retracement pressure, takze pri MSS sa tam musia nachadzat FVG(s) +/-**

(Aby to bol samozrejme dobrý setup ;D)

- Internal liquidity -> takujem partials (eq model)
- External liquidity -> closujeme trade (above eq price points)

ICT Mentorship 2022 Episode 7

- Daily Bias a Consolidation

- Tu sa stalo to, ze sa sweepla liquiidta a nasledne sme zacali consolidovat okolo 0.5 / 0.618 range - IntL (internal liquidity range)
 - Huntme Intraday price action
 - Nasledne v tomto pripade nie je najlepsie dat long
 - Toto sa moze robit na kazdom jednom timeframe

MOST IMPORTANT

- Ked sme right, neznamena to to, ze sme profitable :D

- Nemusime byt vzdy right, podstatne je, ze ci sme profitable ;D

MOST IMPORTANT

- With bias, we are reading, where the market want to go :D
- Tam, kam chce ist Market v dni, tomu sa stickneme :D
- Ked sa dostaneme nad nejaku high, alebo mejaku low, nasledne je sanca, ze pojdem hned retracovat, alebo consolidating
- Ked zacne consolidovat a zastavi sa v EQ a nasledne consoliduje, we rely on intraday market structure -> old lows / highs etc.
- Hrame sa so stoplossmi a nasledne EQ + search for Imbalances :D

- Celkom shitty, ale stale by som bol correct :D
- Nebol to okej setup, ale bol tam MSS + FVG + OB (+);
Target Could be: 0.618 and it is 1:1 RR [small risk]

SMT

- If we see a **divergence**, that means, that is ANOTHER confluence a nasledne podporuje to nasu **IDEU**

MACRO

- Is something inside algo, that is not allowing price to go lower / higher and **creates a SMT!!!**

ALGOS

- ALGOS OPERATE **first on TIME and than price !!**
- First- time, than Price :D

Stoploss

- Ked uz vidime pekny trade, tak nasledne ked sa bojime => **na to je stop loss ;D**

Order

- Takze, pokial chcem spravne vidiet, co robi price na zaklade mojej order, tak to sledujem
(ci to ide oproti biasu, ktory som executol, alebo naopak mojim smerom :D)
- Ked sa mi nepodari, tak nasledne nemusim byt correct,
čiže som chybu spravil pri určovaní dialy bias-u

Drawdown

- Nie je to **Skill issue**
- Learn how to get from drawdown

Connection

- Najlepsie bude, pokial sa budem učiť očas toho, ako budem live rizkovat, len za účelom učenia sa :D
- Connect with market ;D

Pattern

- Tento pattern sa vyskytuje uplné v sade a nasledne to je len o tom, že ho spozorujem a možem sa s ním hrať :D

Ict crying

- he is honest influential trader !

Relationship

- Negative trades => are getting a better **INTEL -(inside)**
- Small little investments, that are giving me info-> intel

ROI- PA

(return of investment of price action)

- Čím viac budem fokusnúty na Price Action, tak tým budem mať väčší intel a samozrejme budem mať viac info ;D

--- Do not scalp :D ---

NEGATIVE DAYS

- Do not accept this
- Learn from **it and... move on :D**
- Ict has faith in me :D

(forex goes sideways)

Ict Mentorship Episode 8 (it's about forex :D)

ICT Mentorship Episode 9

The power of 3
(Amd)

Ny Pm session Opportunities

- False move - > Judas Swing
(Ked sa startne fake run a nasledne-> je to vramci manipulacie docela a nasledne continujeme na nas povodny zamer ;D)

Ked chceme ist -> napriklad long, musime si pockat, pokial to pojde jemne dole, aby to *mozno* sweeplo nejaku **important liquidity** a nasledne mozeme hladat long (/short)

- **POKIAL BY SME CHCELI ENTERNUT LONG, a NESTIHLI SME Enternut, ked price isla dole, ked sa**

candle open-la, tak nasledne najlepsie price entry execution je na urovni, kde sa candle otvorila ;D

4:30- closed day in terms of liquidity pools

- DONT CHASE PRICE !

Sell side liquidity -> that means, in order to make market work they need to break out of *resistance* and that's how should it work

That basically means, that whales in order to make money on you they need to get you out of the trade and than they will hunt your stoploss

So if we see sellside liquidity -> that means, that price is likely go to sweep it and

This low could be interpreted of Judas low, because we swept sellside liquidity (RL) and we retraced

*also could be interpreted as Data Low

- Taktiez sellside liquiidty a *judas swings* mozeme tiez pouzit ako confluences
- Vsetko co vidim, je to na zaklade algoritmov
- Vsetko co vidim, je to precise :D
- Engineering liquidity

- To znamena, ze nasledne vidime, ze sme hore consolidovali a nasledne trochu klesli a potom, co sa stalo bolo to, ze si **retail traders** povedali, ze chcem zarobit, ale musime si dat stoploss (tam ako je sellside liquidity) a nasledne dufali, ze to pojde hore a **SELLSIDE {lrl} = engineering liquidity** (after sweep ofc)

EVERYBODY SAW MARKETS GOING UP, so they want to buy it !

- Ked neviem co robim (ja viem), tak nasledne sa mozeme dostat do pozicie, kde som v bode, kde nebudem right a nasledne mozem prerobit D:

LEARN THE TRUST THE SETUP and let the **stoploss** do its job

MostImportant

- *If it comes to your stoploss, let that happen, its one trade down, not your whole carrier...*
 - *Look for the next one.*
-

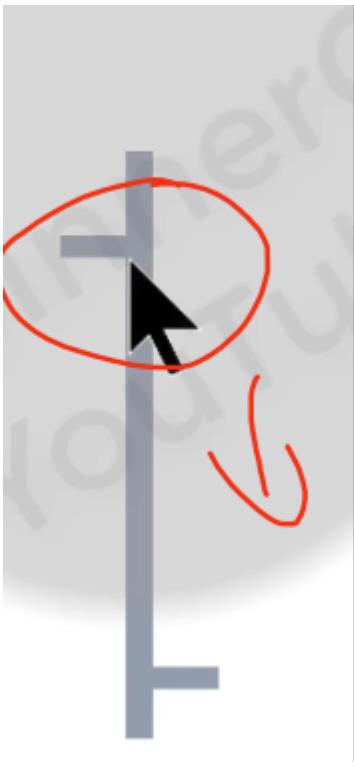

MostImportant

ICT Mentorship 2022 Episode 10

- Implementing economic events calendar
- Folders
- OLHC / OHLC
- If we are bearish, on the high is accumulation -> and there is shorting opportunity and it applies to bullish momentum as well :D

MOST IMPORTANT

- Below or above opening price is opportunity to execute

- AmD in Daily close - we accumulate, than we go up and our distribution is below that, so there is the target, where price wants to go, in order market work
- All you have to do- where is most likely market going to do in day :D
- We have to catch the move up - > where i can do execute in my not so big targets, because there is chance, to go below in order to be bullish overall :D
- After sweep, there is high possibility of either manipulation or accumulation
- Focus on the overall **bias**, so in order to catch the right move, we can move up from loss, if i caught a manipulation instead of distribution
- London session works pretty simmilar, but it is not 1:1
- Even ICT is not always right

- It is all about statistics

Watch for daily candles :D

- I only need a movement ;D

D:

- Watch the live data and old data, so I can see how the price is moving ;D
 - We go from 5 min to 1 min though all of timeframes in between those
 - If i see it on 5 min, i take it
-

MOST IMPORTANT

- Ked tam neni FVG, **nemame trade !**
-

MOST IMPORTANT

- Market is more likely go to be in area of breaker :D

Kokos

*This is something like ATM machine, because every other part
is just like part of pin to it...*

Kokos

MOST IMPORTANT

**PRED ZACATIM MARKETU, SI NAKRESLIM, NAPISEM,
KAM CHCE MARKET IST :D**

MOST IMPORTANT

MOST MOST MOST MOST MOST IMPORTANT

- They want you to press that button, be patient :D
-

MOST MOST MOST MOST MOST IMPORTANT

- Ked chceme byt bullish, chceme aby to jemne manipulovalo dole
- Co sa stane, pokial prehrajeme => stratime peniaze, co ine sa moze stat...
- Traders are professional losers, every trade opens loser
- **You can't be winner, when you don't turn yourself from loser**
- Pozerame na to, co chce market ;D
- Ide o to, ze ked sme bullish, nevadi ked je losing day, pretoze sme vychytali bearish den, ked sme zle odhadli bias
- Nevadi, pokial vramci 10 tradov, nedokazeme spravne tradovat, mame zly risk managment -> to nemusi znamenat fixnute RR alebo risk, ale ide o to, ze tam nieco robime zle :D

IF U GONNA DO THIS AS FAST AS POSSIBLE, YOU GONNA LOSE MONEY

I AM GOING TO BACKTEST A LOT AND GAIN EXPERINCE

THESE MOVES ARE HAPPENING EVERY TIME, ENJOY IT AND HAVE FUN, WHEN YOU ARE LEARNING OR MAKING MONEY

(by learning we could mean also trading real time, without knowing the outcome and not giving a fuck about minus numbers...)

ICT Mentorship 2022 Episode 11

- He is showing, how he did trade :D
- He uses 2m and 4m tf :D
- Focus on bias a nasledne kukni si aj **daily timeframe**
- Vsimaj si open high low close / low high close - that is market
- Study Daily chart 2
- Tiez mozeme pouzit koncept intraday na smaller tf a to nasledne takto:

- Ako mozeme vidiet, je tam FVG - a nasledne ta high (na ktorej neni mycka -> je nasa long term high (aj ked to je na malom tf)) a nasledne je to nasa long term high a potom

vramci intraday konceptu, je tam ta dalsia high (na ktorej ma ICT mysku) a nasledne na nej mozeme assumovat, ze to je enemy high a ako tam je vidno, je tam **Market structure shift** a dalsia *conflikunence* do naseho tradu

- Taktiez po tej swing high (kde je myska) po nej nasleduje nizsia high -> ITL a nasledne je to sign of bearish momentum
- I will learn ***what iam looking for and why iam waiting*** for, by developing a patience and developing model

Optimal entry isn't at the lowest low and highest low, it is about understanding on levels, where / when iam executing

AFTER A BIG MOVE, DO NOT TRADE A NY SESSION !

mozem ist napriklad na demo a nasledne uvidiet, ci som correct :D

MUSIS VEDIET, KEDY enough is enough

- Toto je velmi podstatne, pretoze musim vediet, co staci, to staci, nepotrebujem viac, pretoze sa nasledne na tom opat popalim !!!

It is normal to change your mind often, but stick to what you know! and you know damn good ! :D
